Kalin Chakma

Software Engineer

Email: none.kalin.chakma@gmail.com GitHub: github.com/kalinchkma Phone: +8801938 576914

SUMMARY

Software Engineer experienced in building scalable web applications, microservices, and AI-powered solutions. Proficient in Golang, Node.js, and Rust, with strong expertise in backend development, system design, and backend architecture. Skilled in building high-performance services, RESTful and gRPC APIs, and cloud-native solutions with a focus on concurrency and reliability.

EXPERIENCE

Software Engineer/IT Consultant Jun 2026 – Present

Neoscoder — Dhaka, Bangladesh

Consulting through Riseup

- Worked as a software engineering consultant to troubleshoot, enhance, and integrate business-critical products and services.
- Support B2B integrations for Metromart Online with major partners including Robi, Grameenphone (GP), and City Bank.
- Lead and support integrations with third-party platforms such as foodpanda and Foodi, ensuring reliable API communication and data synchronization.
- Develop, troubleshoot, and optimize Point-of-Sale (POS) systems, resolving technical issues and improving system reliability.

Software Engineer Feb 2026 – Present

Riseup Labs — Dhaka, Bangladesh

- **Backend Architecture:** Designed the overall backend project structure from scratch, including how the database layer is organized, how services communicate, and how the codebase should scale.
- Built a multi-driver file upload module that works with AWS S3, Azure Blob Storage, Google Cloud Storage, and local storage through a single shared interface, so switching providers requires no changes to business logic.
- Set up a cache manager, a JWT-based authentication system with refresh token support, and a security layer covering route guards, interceptors, and CORS configuration.
- **Headless CMS – Insurance Platform:** Worked on a large-scale CMS for an insurance company, setting up content types, data relationships, and role-based access for different user groups.
- Added a Redis caching layer to lower database load and speed up API responses.
- Wrote a media backup system that handles file/media storage backups on a schedule.
- Built an email notification system to send transactional and event-based emails.
- Implemented API access validation, rate limiting, and request sanitisation to improve security across the platform.
- Improved overall performance through query optimisation, proper indexing, and reducing unnecessary payload sizes.

Software Engineer 2024 – Jan 2026

Mediusware Ltd — Dhaka, Bangladesh

- Designed responsive frontend interfaces from Figma with cross-browser compatibility.
- Integrated backend APIs into frontend designs for enhanced functionality.
- Optimised legacy application code, improving stability and performance.

SKILLS

Programming Languages

Golang, Node.js, Rust, Python, C/C++

Frameworks

Express.js, Nest.js, Gin, Gorm, Actix-web, FastAPI, ClamAV, Pandas, PyTorch, NumPy

Databases

PostgreSQL, MongoDB, MySQL, Redis

Cloud / DevOps

AWS (S3, Lambda), Docker, Nginx, Git, CI/CD

Technical

System Design, ML / DL, Serverless, Backend Engineering, Microservices, AI

EDUCATION

B.Sc. in Computer Science Engineering

Presidency University, Bangladesh

2019 – 2024 · Dhaka, Bangladesh

Concentrations: Software Development, Machine Learning, Programming

ACTIVITIES

ICPC – Asia Dhaka Regional

October 2022 · Team PU_HUNTERS, Presidency University

PUBLICATIONS

Kalin, C. (2024). A novel dataset of Gupta archer-type coins for machine learning-based classification. Data in Brief. Available online 17 Sep 2024. doi:10.1016/j.dib.2024.110934

LANGUAGES

English – Medium

Bangla – Proficient

- Built a rich-text editor for dynamic content management.
- Developed serverless functions for scalable cloud solutions.
- Created an AI-driven mobile app server with RAG, vector search, and LLM integration.
- Architected a car-auction platform with microservices and gRPC; built API and WebSocket servers, a PDF parsing service, Redis caching, PostgreSQL storage, and CDN.
- Developed a GraphQL API for ad automation.
- Built a service for network printer scanning and management.
- Developed a full-stack application that parses Evernote files, processes notebook data, integrates with the Evernote API, and renders content in a web interface.

Researcher 2023 – 2024
Self-Employed — Dhaka, Bangladesh

- Collaborated with a professor to curate the Gupta coin dataset for ML training.
- Collected and cleaned data from various sources and auctions.
- Trained ResNet-15, ResNet-152, and custom models to classify real vs. fake coins.

Web Developer – Freelance 2023 – 2024
Local — Remote

- Built a game-currency marketplace with real-time features, deployed on a VPS with a reverse proxy.
- Developed a physiotherapy clinic app with full-stack architecture, deployed via cPanel.

PERSONAL PROJECTS

Authenticity Detection of Ancient Bengal Coins – ML Web App

- Built a web app with deep learning models to detect fake ancient Bengal coins, trained on Google Colab.
- Source: github.com/kalinchkma/Automatic-Authenticity-Detection-of-Ancient-Bengal-Coins

Geko – Tools for Server-Native Applications

- Created a Go project scaffold for building high-performance server-native applications with built-in mail, ORM, and routing support.
- Source: github.com/kalinchkma/geko
